

Why Choose Premier

WE ARE CUSTOM

The benchmarks of a truly custom cabinetmaker include the ability to develop and manufacture their own doors and drawers, source their own woods, lay-up their own veneers, and create unlimited finish options.

Custom means working in materials such as wood, metal, leather, and glass. Custom means having the design and manufacturing talent to create styles that include everything from rustic traditional to sophisticated contemporary. At Premier Custom-Built, these are our core capabilities.

With decades of skill and experience, a dedicated workforce, and engineering excellence applied to everything we do, Premier is the natural choice for all your custom cabinet and millwork needs.

CONSTRUCTION

Stunning materials and great design are nothing without great execution, and the quality of our door, drawer, and cabinet construction is our top priority.

A definitive measure of woodworking competence is building products that endure the tests of time, temperature, and movement. A tight-fitting joint, exact machining, and precise gluing applications which are fully-cured under pressure, result in uncompromised door and cabinet strength, and ensure long-term product performance.

While we take pride in how our joints function, we also want them to look great on exposed surfaces. For that reason, we use a full finger joint on our drawer boxes and roll-out shelves.

Extremely functional and very beautiful joinery — both are achieved by the skilled craftsman at Premier.

VENEER

Modern woodworking would not be the same without veneer. Veneer allows a designer to work with a material that offers unique and unlimited visual effects, while producing durable, long-lasting products.

Some of the most beautiful trees in the world are harvested for veneer, and Premier's wood buyer travels the world to find them. Each veneer species has its own interplay of color, grain, figure, and texture, while each log within the species possesses its own individual characteristics.

Veneers are used in both Contemporary and Traditional applications, and the material choice and lay-up sequence are carefully planned. Every Premier project is processed individually, with the veneer selection tailored to each job; and with our decades of skill and experience in working with veneer, we know how to develop each project to make it special.

From being a sustainable choice to providing the most dramatic and beautiful designs, specifying one of Premier's exquisite, hand-selected veneers provides you with a truly custom project!

FINISH

The ability to create the color, feel and character you want for your project is a “best-in-class” trait of Premier, and we pride ourselves on having the most comprehensive finish capabilities and options in the cabinet and millwork industry.

Stain, Paint, Milk Paint, Polyester, Pure Metal, Powder-coat, and Metal Plated finishes are just the beginning of an endless array of choices. When combined with sheen levels encompassing everything from matte to high gloss, numerous glaze options, a variety of finishing techniques, and many distressing packages, our designers have the ability to create very individual, one-of-a-kind rooms for their clients.

To date, our color lab technicians have developed over 5,000 custom colors and effects, ranging from extreme rustic to sophisticated contemporary — a true testament to the fact that we can create any look you desire.

METAL

Our enthusiastic approach to metal has kept us ahead of the design curve. Today, the majority of our projects include metal in some form or fashion.

Metal working is an art, and our metal specialists work in a dedicated building, where they manufacture everything from parts and pieces to complete cabinet assemblies. With many finish options that include plating and polishing to blackening or antiquing, we can achieve looks that fit every style.

In addition to working with solid metal, we also apply metal in a liquid form, called Pure Metal, which can be specified in a polished, brushed, or textured patina.

Whether it's a simple accent piece, door inserts, or an entire project, Premier is well suited to meet all your metal needs.

UNIQUE MATERIALS

With new trends come new opportunities to stay on the leading edge of design, and as the market continuously expands to include everything from interesting colors and textures, to special materials and hardware, so too does Premier's product offering and manufacturing capabilities.

Beautiful reconstituted and hide leathers, reclaimed canvas, unique laminates, many types of metal inserts, and a variety of textured, printed, mirrored, and back-painted glass selections, are just a few examples of the materials we work with.

Custom requests are always an option, so if you find a material that you "have-to-have" let us know.

LIGHTING

State-of-the-art lighting options are part of Premier's offering and include both interior and under cabinet solutions.

Our patented LED lighting technology can be attached to adjustable shelves, installed above drawers and rollouts or be positioned vertically or horizontally in cabinet sides and floors.

Additionally, Premier's internally-lighted glass shelves are fully adjustable, and provide another interior lighting choice.

Whether you're looking for task lighting or simply want to create ambiance in your room, Premier has a beautiful lighting package to fit your every need.

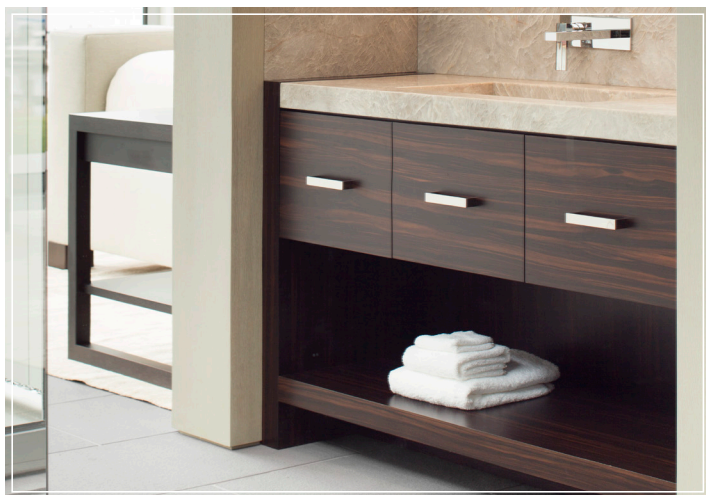

EXTRAORDINARY SPACES

Equally important to the function and style of the kitchen is the comfort and look of the rest of your home.

A spa-like bathroom, a home office, a master suite or a beautiful outdoor kitchen; it's all possible with Premier cabinetry.

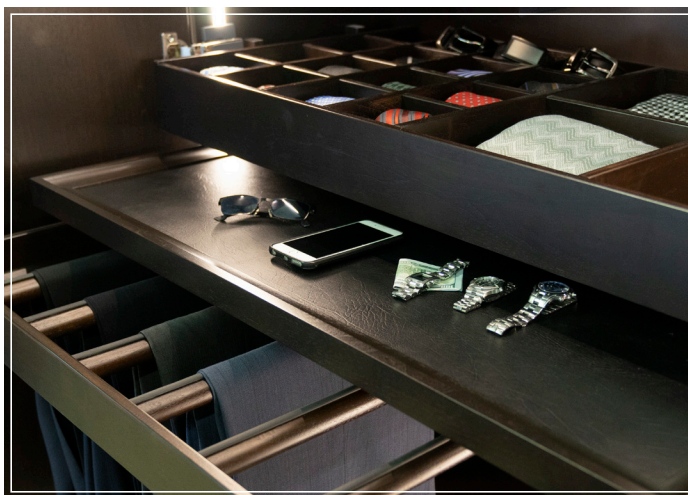

INTERIOR ACCESSORIES

With a broad range of custom interior accessories, Premier has storage solutions for every room in your home. From cutlery trays and knife blocks, to jewelry dividers and closet organizers, our accessories are beautifully crafted and stylish.

Like every component that makes a Premier product special, we rigorously test our accessories to make sure they can stand the test of time and use.

Designed to accommodate any scenario, we can custom fit our interior options to meet your every need.

PROJECT MANAGEMENT AND ENGINEERING

Our Project Managers are known for their careful attention to detail and extensive product knowledge. Each design is managed exclusively by a single person, who focuses their attention on the project from start to finish.

Working in conjunction with our Project Managers is our Engineering team. Their keen understanding of product application, materials, functional hardware and the many custom options offered by Premier, makes them an integral and important part of our process.

This combined team of talented and experienced people is unrivaled in the industry and speaks to how the combination of the Art of Design and the Science of Manufacturing create stunning, one-of-a-kind projects.
